Trimester 4, 2026–2027 · KLH Bachelor of Technology, CSE

Problem Statement

1 Recipes are scattered

Saved across notes, bookmarks and chat messages, so they are hard to find again.

2 Planning takes effort

Weekly meal planning is done by hand from memory, week after week.

3 Lists are manual

Ingredient lists are written recipe by recipe, with no link to the plan.

Need: one simple application for recipes, plans and ingredients.

Proposed Solution

A web platform where home cooks share recipes, plan a weekly menu and get a grocery list generated automatically, with nutrition information.

Recipes are scattered

One searchable, categorised recipe database

Planning is manual

Weekly planner built from saved recipes

Lists are written by hand

Grocery list auto-merged from the meal plan

Key Features

R

Recipes & Accounts

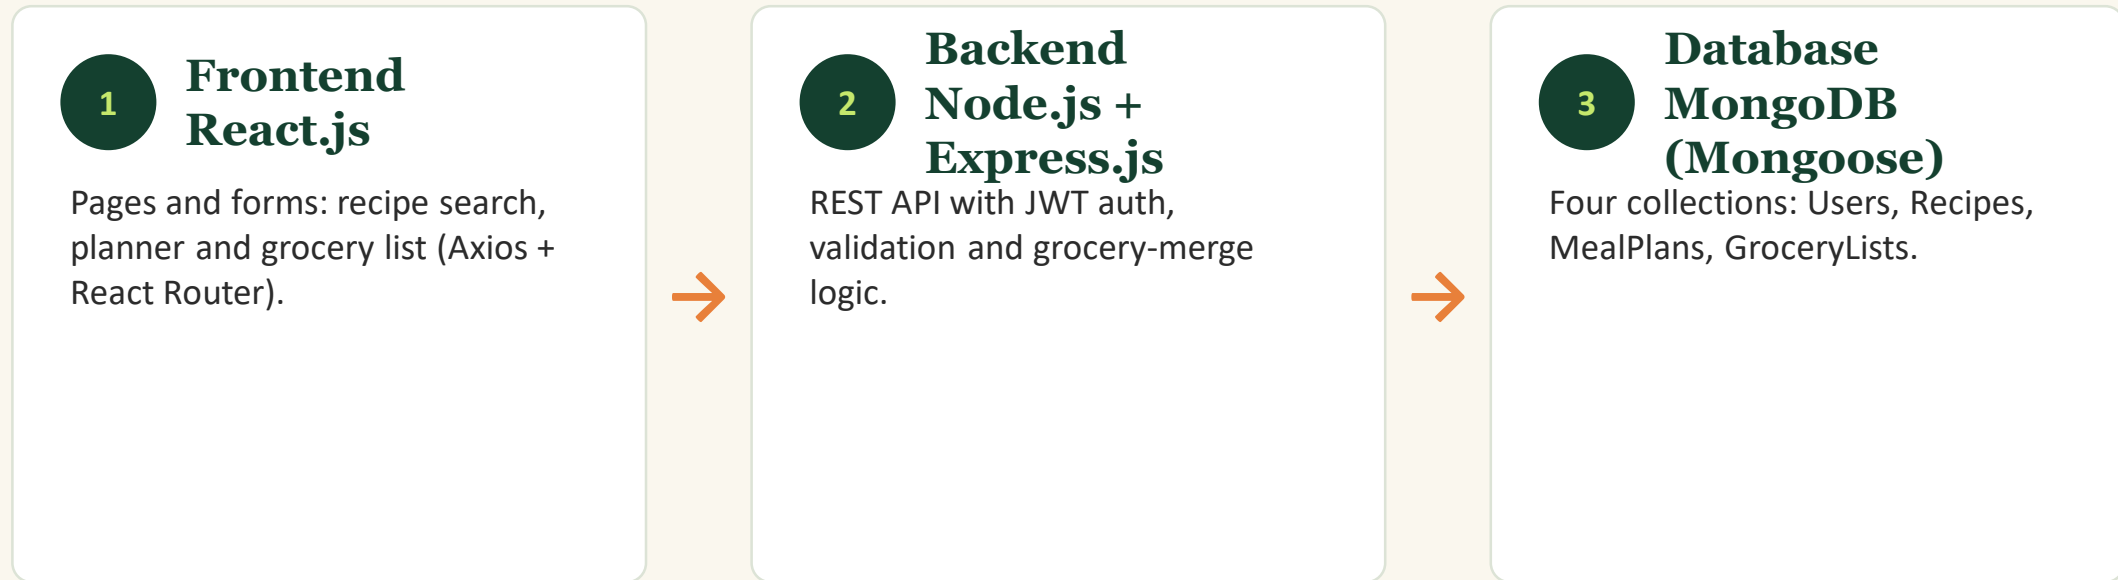

- User registration and login
- Create recipes with ingredients and instructions
- Search by category; rate and save recipes

P

Planning & Nutrition

- Weekly meal planner by day and meal
- Grocery list generated from planned recipes
- Nutrition info through an external API

System Architecture

External services — Cloudinary (recipe images, only URLs stored) and a Nutrition API (calories, protein, carbs, fat) — are called only from the backend.

Technology Identification

R **React.js**

Frontend single-page app

N **Node.js +
Express**

REST API backend

M **MongoDB +
Mongoose**

Document database

C **Cloudinary**

Recipe image storage

N **Nutrition API**

Calories and macros

J **JWT + bcrypt**

Auth and password hashing

P **Postman**

API testing

G **Git & GitHub**

Version control

- Team ID 28 · Section S-10 · Trimester 4, 2026–2027
- Course: 25CS1302E — Database Systems Engineering and Distributed Backend Development
- Guide: [to be added]

Expected Outcome & Future Scope

- Recipes, meal plans and shopping lists in one place
- Less time spent planning meals each week
- Grocery list that always matches the plan
- Nutrition information visible on every recipe

Future scope Unit conversion in grocery lists, email verification and password reset, recipe comments and follows, daily nutrition totals in the planner.

Proposed system — features reflect planned functionality.
